Micro Gone Tincture

Available in 48 & 96 Serving Liquid

Pau d'arco is a Latin American herb used to help both acute and chronic illnesses including infections and cancer. In vitro studies have shown it to be anti-bacterial, anti-viral, and anti-fungal. Two of the active anti-fungal constituents in Pau d'arco were shown in laboratory tests to be as potent as ketoconazole. Indigenous people in Central and South America as well as Caribbean healers use pau d'arco for infectious diseases, sexually transmitted diseases, wounds, and other health conditions.

Black walnut hulls (*Juglans nigra*) and Butternut bark (*Juglans cinerea*) are native to the Middle East but now have worldwide distribution. Various parts of these trees are used medicinally, including the walnut hulls and the bark. *Juglans* has affinity for the gastrointestinal tract and has been used to alleviate hepatic dysfunction, jaundice, reduced appetite, and both constipation and diarrhea. *Juglans* may be used internally or topically for ringworm, eczema, and herpes. This herb may also help eliminate tapeworms and pinworms.

Echinacea Angustifolia is well known for assisting the body in recovery from acute infections. Echinacea is a wildflower native to North America and was used by some Native American tribes to treat venomous bites. It activates white blood cells and may increase interferon production, which is important in fighting viral infections. Recent research indicates that echinacea is most helpful at the onset of acute infections rather than for prevention of colds and flu.

Olive Leaf Extract may be useful for fighting infections, lowering blood pressure, and inhibiting oxidation of LDL cholesterol.

Usnea barbata (tree lichen) has been used as an antimicrobial: both antibiotic and antifungal. Usnea also contains polysaccharides that may be immunomodulating. Herbalists have also used usnea to stimulate digestion since it has bitter properties.

Lomatium root is native to western North America and was used by Native Americans to fight all manner of infections. It is effective against both gram positive and gram negative bacteria, and may also be anti-viral.

Cat's claw bark is native to South America. This herb has many traditional applications including intestinal complaints, gastric ulcers, dysentery, rheumatism, and wound healing. In vitro studies suggest that cat's claw bark stimulates immune function. This herb has also been clinically proven to improve osteoarthritis and rheumatoid arthritis.

Wormwood (*Artemisia absinthium*) is a shrub that grows in Europe, North Africa, western Asia, and North America. Its leaves, flowers, and essential oil have all been used medicinally by herbalists. Wormwood is traditionally classified as a bitter to stimulate digestion and relieve intestinal spasms. It has been taken in combination with other herbs to treat the abdominal discomfort and cramping that accompany Irritable Bowel Syndrome. Its bitter constituents include absinthin and anabsinthin which stimulate gall bladder function.

Suggested Use: 1-2 droppers, 1-2 times per day.

Warning: Do not use if you are pregnant or nursing, have tuberculosis, or have had an organ transplant. If you are taking any medications, including blood thinning medications like coumadin or aspirin, please consult your health care practitioner before taking this or any herbal product. Not for use in children under 3 years of age.

SUPPLEMENT FACTS

Serving Size: 1 Dropper

Servings Per Container: 48 or 96
